

# Leading Causes of Death, 2009

introduction

Spokane Regional Health District evaluates death records to track mortality trends among county residents. The leading causes of death, as presented here, parallel that of the National Center for Health Statistics, housed in the Centers for Disease Control and Prevention (CDC). Each cause of death represents a group of distinct diagnoses. For example, within the category of cancer are many types of cancer, each with its own risk factors, treatments, and preventive measures. National mortality statistics can be found at the CDC's website: [www.cdc.gov/nchs/fastats/deaths.htm](http://www.cdc.gov/nchs/fastats/deaths.htm). Washington State data are available through the Department of Health, Center for Health Statistics: [www.doh.wa.gov/EHSPHL/CHS/CHS-data/death/dea\\_vd.thm](http://www.doh.wa.gov/EHSPHL/CHS/CHS-data/death/dea_vd.thm).

The leading causes of death among Spokane County residents in 2009 were cancer and heart disease.

The leading causes of death among Spokane County residents in 2009 were cancer and heart disease. Similar to state and national trends, these two causes of death accounted for nearly half of all deaths. Leading causes of death vary by age. Perinatal conditions, which make survival difficult, such as a preterm birth, respiratory distress, or feeding problems are the leading cause of death for infants. Younger age groups are more likely to die from either intentional or unintentional injury than are older age groups. Among older age groups, leading causes of death are more likely related to physical health conditions, such as heart disease.

## Top 10 Leading Causes of Death, Spokane County, 2009

Rank	Cause of Death	Number of Deaths	Percent of Total	Cumulative Percent
1	Cancer	901	22.6	22.6
